

Muhammad Haseeb

Full Stack Engineer

Mississauga, ON | +1 (289) 776-8812 | ihaseeb1995@gmail.com | [LinkedIn](#) | [Portfolio](#)

Summary

Full Stack Engineer with 6+ years of experience architecting and delivering scalable production applications across SaaS, EdTech, and IoT. Strong experience with React, Next.js, TypeScript, Node.js, REST APIs, AWS, and SQL, with a focus on application performance and automated testing. Experienced in AI-assisted software development using Claude Code, Cursor, and GitHub Copilot to accelerate development, debugging, refactoring, and test generation.

Skills

Languages: JavaScript, TypeScript, Python, SQL

Frontend: React (Context API, Redux), Next.js, HTML5, CSS3, Tailwind CSS, shadcn/ui, Bootstrap, Svelte

Backend / APIs: Node.js (Express.js), FastAPI, RESTful APIs, JWT, OAuth 2.0

Cloud & Databases: AWS (EC2, S3, DynamoDB, Cognito), Azure, Supabase, PostgreSQL, MySQL, Firebase (Firestore)

Testing: Jest, Vitest, React Testing Library, Playwright

DevOps & Build Tooling: Docker, Kubernetes, CI/CD (GitHub Actions), Vite, Webpack

AI & Developer Tools: OpenAI Agents SDK, MCP Servers, Claude Code, Cursor, GitHub Copilot

Version Control: Git, GitHub

Work Experience

Frontend Developer (Remote) — *Vitzo Limited, Cheyenne, WY, USA*

August 2023 – Present

- Built and enhanced scalable, user-facing web application features using React and TypeScript across multiple products, ensuring maintainable architecture and consistent UI patterns
- Developed a Chrome extension for capturing, editing, and sharing screenshots, leveraging Fabric.js for advanced canvas-based image manipulation
- Improved application performance through code splitting, image optimization, extraction of shared logic into a common package, and effective use of memoization techniques
- Leveraged AI-assisted development tools (Claude Code, GitHub Copilot) to accelerate feature delivery, debugging, refactoring, and automated test generation across React and TypeScript applications
- Translated pixel-perfect designs from Figma and Zeplin into responsive, high-quality interfaces, ensuring consistency across devices and browsers
- Added multilingual support using i18next, enabling localization and expanding product accessibility to a broader user base
- Conducted code reviews via GitHub and Beanstalk, improving code quality, maintainability, and team development standards
- Created end-to-end test suites using Playwright to ensure application reliability across critical user flows

Full Stack Developer — *Knowledge Platform (Private) Limited*

August 2020 – August 2023

- Developed a scalable, cross-platform Content Management System (CMS) using React and JavaScript, enabling educators to create and manage interactive e-learning content including lessons, quizzes, and games across multiple institutions

- Built a Learning Management System (LMS) portal using Svelte and JavaScript, enabling students and educators to access content, track progress, and engage with learning materials seamlessly
- Architected and maintained unit and end-to-end testing frameworks, ensuring reliability across critical user workflows and reducing production issues
- Mentored and guided 2 junior developers through code reviews, pair programming, and best practices, improving code quality and accelerating their onboarding and feature delivery
- Refactored existing code to improve readability, modularity, and maintainability, accelerating feature development and reducing time-to-delivery
- Authored technical documentation for APIs, components, and system workflows, accelerating onboarding and reducing long-term technical debt

Backend Engineer — Anzen Private Limited

July 2019 – August 2020

- Delivered backend features in a fast-paced startup, meeting tight deadlines and enabling rapid product iteration
- Developed a scalable pub/sub backend using Node.js and MQTT protocol to enable seamless communication between IoT devices
- Developed a React dashboard to visualize sensor data and system metrics for an IoT drip irrigation platform
- Implemented the ELK stack (Elasticsearch, Logstash, Kibana) to track and visualize client activity on IoT devices, improving sales forecasting and identifying optimization opportunities
- Configured and managed AWS cloud services to support IoT data processing and monitoring
- Improved database efficiency and maintainability through MySQL query optimization, stored procedures, and reliable backup/restore processes

Recent Projects

[Clipwise](#) — Safe and focused video sharing platform for educators; built and optimized core frontend features enabling distraction-free playback while adhering to creator rights and permission-based usage.

[ScreenClip](#) — Screenshot capture and annotation platform; built canvas-based editing features and a Chrome extension for capturing, annotating, and sharing web content.

[SafeShare](#) — Widely used global platform for safely sharing YouTube and Vimeo videos in educational settings; implemented and maintained frontend UI flows to ensure clean, inappropriate-content-free viewing experiences.

[Knowledge Platform CMS](#) — Custom CMS for creating and managing e-learning lessons, quizzes, and educational games; developed scalable frontend modules and integrated APIs to support content creation workflows.

[Knowledge Platform LMS](#) — Learning portal for students and educators; built responsive interfaces for assessment access, progress tracking, and learning workflows.

Education

Master of Science in Project Management — Bahria University

September 2020 – March 2022

Bachelor of Science in Computer Science — Air University

September 2014 – January 2019
